HELP PROTECT YOUR HVAC SYSTEM

During Poor Air Quality Days

- Run your HVAC on recirculation mode
- Change filters regularly
- Use an independent air purifier
- Keep windows and doors closed during peak alert times
- Schedule a professional duct & condenser coil cleaning

General Summer HVAC Tips

- Schedule preventative maintenance before the season changes
- Check & clear the drainage line
- Remove debris from your outdoor unit
- Install a smart thermostat

HELP PROTECT YOURSELF

- Check the Air Quality Index before heading outside & limit strenuous activity on poor air days
- Wear UV-protective clothing & a wide-brim hat to shield your skin
- Apply sunscreen daily with SPF 30 or higher and reapply every two hours (or more if you are in water)
- Stay hydrated
- If possible, plan outdoor activities outside of peak UV hours (10 am - 4pm)
